## Kiran TALELE

**@ Bharatiya Vidya Bhavans' Sardar Patel Institute of Technology Andheri(w) Mumbai**

- **Associate Professor**, Electronics Engineering Department (1997)
- **Dean**, Students, Alumni & External Relations (2022)

**@ Sardar Patel Technology Business Incubator(SP-TBI),  
Funded by Department of Science & Technology(DST),  
Govt. of India**

- **Head**, Academic Relations (2015)

**@ IEEE Bombay Section**

- Treasurer (2020)
- Executive Committee Member (2015)

Kiran TALELE

3

# Chapter-1 : Discrete Time Signal

**Objective :** To learn the fundamental concepts of Digital Signal Processing

**Outcome :** At the end of module students will be able to,

- **Understand** the concept of DT Signal
- **Evaluate** Sampling and Reconstruction
- **Perform** signal manipulation
- **Represent** DT Signal using standard signals
- **Classify** DT signals
- **Perform** Convolution and Correlation operation

**Kiran TALELE 99870 30 881 kiran.talele@spit.ac.in**

**5**

## Contents

- Introduction to Digital Signal Processing
- Discrete Time Signals
- Standard DT Signals
- Linear Shifting of Non-Periodic Signals
- Circular Shifting of Periodic Signals
- Representation of DT signal using Standard DT Signals
- Concept of Digital Frequency
- Classification of Signals
- Signal Manipulations(Shifting, Addition, Subtraction, Multiplication)
- Sampling and Reconstruction
- Linear Convolution
- Circular Convolution
- Matrix Representation of Circular Convolution
- Linear by Circular Convolution
- Auto and Cross Correlation formula evaluation

**Kiran TALELE 99870 30 881 kiran.talele@spit.ac.in**

**6**

## # Standard Discrete Time Signals

(1) Delta Signal OR Impulse Signal

OR Unit Sample Signal

(2) Unit Step Signal

(3) Sinusoidal Signal

Kiran TALELE 99870 30 881 kiran.talele@spit.ac.in

7

## # Classification of DT Signals

(1) Deterministic / Non-deterministic

(2) Causal / Anti-Causal / Bothsided

(3) Periodic / Non-Periodic

(4) Energy / Power / Neither Energy Nor Power

(5) Even / Odd / Neither Even Nor Odd

Kiran TALELE 99870 30 881 kiran.talele@spit.ac.in

8

## (I) Deterministic / Non Deterministic Signal

If Discrete Time Signal  $x[n]$  can be represented mathematically,  
Then  $x[n]$  is called Deterministic Signal

Otherwise  $x[n]$  is called Non Deterministic Signal.

e.g.  $x[n] = \text{Sinusoidal Signal} : \cos(0.6 \pi n)$

**Noise Signal**  $\rightarrow$  Non Deterministic

**ECG Signal**  $\rightarrow$  Non Deterministic

Kiran TALELE

kiran.talele@spit.ac.in

9

## (II) Causal / Anti-Causal / Bothsided

### 1. Causal Signal :

If  $x[n] = 0$  for all  $n < 0$

Then  $x[n]$  is **causal** Signal.

Examples :

(i)  $x[n] = \{ 9, 9, 8, 7, 0, 3, 0, 8, 8, 1 \}$

(ii)  $x[n] = u[n]$

Kiran TALELE

kiran.talele@spit.ac.in

10

## 2. Anti-causal Signal :

If  $\mathbf{x[n] = 0}$  for all  $\mathbf{n \geq 0}$   
 Then  $\mathbf{x[n]}$  is **Anti-causal** signal.

Examples :

$$x[n] = \{ 9, 9, 8, 7, 0, 3, 0, 8, 8, 1, 0 \}$$

$$x[n] = u[-n-1]$$

Kiran TALELE

kiran.talele@spit.ac.in

11

## 3. Both Sided Signal :

If  $\mathbf{x[n]}$  is Neither Causal  
 Nor Anti-causal  
 Then  $\mathbf{x[n]}$  is **Both-sided** signal.

Examples :

$$x[n] = \{ 1, 2, 3, 4, 5, 6 \}$$

$$x[n] = \{ 1, 2, 3, 4, 5, 6 \}$$

Kiran TALELE

kiran.talele@spit.ac.in

12

Example of Causal / Anti-causal & Both Sided ( infinite length ) Signals :

(i) Causal signal :  $x[n] = u[n]$

(ii) Anti-causal signal :  $x[n] = u[-n-1]$

(iii) Both sided signal :  $x[n] = u[n] + u[-n-1]$

Kiran TALELE

kiran.talele@spit.ac.in

13

### (III) Periodic / Non-periodic Signal

If Digital frequency of signal  $x[n]$  is a rational number then  $x[n]$  is periodic.

Otherwise  $x[n]$  is Non-periodic.

Examples:

$$(1) x[n] = \cos ( 0.3 \pi n )$$

$$(2) x[n] = \cos( 0.3 \pi n + 0.5 \pi )$$

$$(3) x[n] = \cos( 0.3 n )$$

Kiran TALELE 99870 30 881 kiran.talele@spit.ac.in

14

#### (IV) Energy / Power / Neither Energy Nor Power

1. Energy of signal is defined as,

$$E = \sum_{n=-\infty}^{\infty} |x[n]|^2$$

If Energy of  $x[n]$  is finite  
Then  $x[n]$  is an Energy Signal.

Examples :

Energy : 30 ( Finite )

$$x[n] = \left(\frac{1}{2}\right)^n u[n]$$

Energy : 2 ( Finite )

Kiran TALELE 99870 30 881 kiran.talele@spit.ac.in 15

2. Average Power of signal is defined as,

$$P = \lim_{N \rightarrow \infty} \frac{1}{2N+1} \sum_{n=-N}^N |x[n]|^2$$

If Power of  $x[n]$  is finite and nonzero  
Then  $x[n]$  is a Power Signal.

Example :

$$x[n] = u[n]$$

Energy :  $\infty$   
Power : 0.5 ( Finite )

Kiran TALELE 99870 30 881 kiran.talele@spit.ac.in 16

Ex-1.  $x[n]=u[n]$     ← Unit Step Signal,

(i) To find Energy :

$$E = \sum_{n=-\infty}^{\infty} |x[n]|^2$$

$$E = \sum_{n=0}^{\infty} |u[n]|^2$$

$$E = 1^2 + 1^2 + 1^2 + 1^2 \dots$$

$$E = \infty$$

Since Energy is infinite,  
 $u[n]$  is NOT an Energy Signal.

Kiran TALELE 99870 30 881 kiran.talele@spit.ac.in 17

(ii) To find Average Power :

$$P = \lim_{N \rightarrow \infty} \frac{1}{2N+1} \sum_{n=-N}^N |x[n]|^2$$

$$P = \lim_{N \rightarrow \infty} \frac{1}{2N+1} \sum |u[n]|^2$$

$$P = \lim_{N \rightarrow \infty} \frac{1}{2N+1} \sum_{n=0}^N |u[n]|^2$$

$$P = \lim_{N \rightarrow \infty} \frac{N+1}{2N+1}$$

$$P = \lim_{N \rightarrow \infty} \frac{1 + \frac{1}{N}}{2 + \frac{1}{N}} \quad P = \frac{1}{2}$$

Since Average  
 Power is finite and  
 non zero,  $u[n]$  is a  
 Power Signal.

Kiran TALELE 99870 30 881 kiran.talele@spit.ac.in 18

Ex-2  $x[n] = r[n] \leftarrow$  Unit Ramp Signal,,

(i) To find Energy :

$$E = \sum_{n=-\infty}^{\infty} |x[n]|^2$$

$$E = \sum_{n=0}^{\infty} |r[n]|^2$$

$$E = (0)^2 + (1)^2 + (2)^2 + \dots$$

$$E = \infty$$

Since Energy is infinite,  
 $x[n]=r[n]$  is NOT an Energy Signal.

Kiran TALELE 99870 30 881 kiran.talele@spit.ac.in 19

(ii) To find Average Power :

$$P = \lim_{N \rightarrow \infty} \frac{1}{2N+1} \sum_{n=-N}^N |x[n]|^2$$

$$P = \lim_{N \rightarrow \infty} \frac{1}{2N+1} \sum_{n=0}^N |r[n]|^2$$

$$P = \lim_{N \rightarrow \infty} \frac{1}{2N+1} \{ (0)^2 + (1)^2 + (2)^2 + \dots \}$$

$$P = \infty$$

Since Average Power is infinite ,  
 $x[n]$  is NOT a Power Signal.

Kiran TALELE 99870 30 881 kiran.talele@spit.ac.in 20

Ex-3  $x[n] = e^{2n} u[n]$ ,

(i) To find Energy :

$$E = \sum_{n=-\infty}^{\infty} |x[n]|^2$$

$$E = \sum_{n=0}^{\infty} |e^{2n}|^2$$

$$E = \sum_{n=0}^{\infty} (e^4)^n$$

$$E = \sum_{n=0}^{\infty} (54.59)^n$$

Since Energy is infinite,  
 $x[n]$  is NOT an Energy  
 Signal.

$$E = \infty$$

Kiran TALELE 99870 30 881 kiran.talele@spit.ac.in

21

(ii) To find Average Power :

$$P = \lim_{N \rightarrow \infty} \frac{1}{2N+1} \sum_{n=-N}^N |x[n]|^2$$

$$P = \lim_{N \rightarrow \infty} \frac{1}{2N+1} \sum_{n=0}^N |e^{2n}|^2$$

$$P = \infty$$

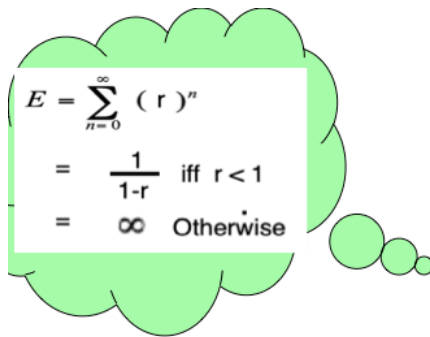

Since Average Power is infinite ,  
 $x[n]$  is NOT a Power Signal.

Kiran TALELE 99870 30 881 kiran.talele@spit.ac.in

22

Ex-4  $x[n] = (0.5)^n u[n]$ ,

(i) To find Energy :  $E = \sum_{n=-\infty}^{\infty} |x[n]|^2$

$$\begin{aligned} E &= \sum_{n=0}^{\infty} (r)^n \\ &= \frac{1}{1-r} \quad \text{iff } r < 1 \\ &= \infty \quad \text{Otherwise} \end{aligned}$$

$$E = \sum_{n=0}^{\infty} |(0.5)^n u[n]|^2$$

$$E = \sum_{n=0}^{\infty} (0.25)^n$$

$$E = \frac{1}{1 - 0.25} \quad E = \frac{4}{3} \text{ (Finite)}$$

Since Energy is finite,  $x[n]$  is an Energy Signal.

Kiran TALELE 99870 30 881 kiran.talele@spit.ac.in

23

(V) Even / Odd / Neither Even Nor Odd

### 1. EVEN Signal

$$\text{If } x[n] = x[-n]$$

Then  $x[n]$  is Even Signal.

### 2. ODD Signal

$$\text{If } x[n] = -x[-n]$$

Then  $x[n]$  is Odd Signal.

Kiran TALELE 99870 30 881 kiran.talele@spit.ac.in

24

Examples :

(i) Even signal :  $x[n] = \begin{Bmatrix} -1 & -2 & 3 & -2 & -1 \end{Bmatrix}$   
 $\uparrow$

(ii) Odd Signal  $x[n] = \begin{Bmatrix} 1 & 2 & 0 & -2 & -1 \end{Bmatrix}$   
 $\uparrow$

(iii) Neither Even nor Odd signal :  $x[n] = \begin{Bmatrix} 1 & 2 & 3 & 4 \end{Bmatrix}$   
 $\uparrow$

**Kiran TALELE 99870 30 881 kiran.talele@spit.ac.in 25**

- NOTE :
- (1) When digital frequencies are separated by multiples of  $\pm 2\pi$   
Then Discrete Time Signals are exactly Same..(i.e. their Samp values are identical)
  - (2) Range of Digital frequency  $\omega$  is  $(-\pi, \pi]$  for mathematical analysis.
  - (3) Range of Digital frequency  $f$  is  $\left[-\frac{1}{2}, \frac{1}{2}\right]$  for mathematical analysis

**Kiran TALELE 99870 30 881 kiran.talele@spit.ac.in 26**

## **(1) What is DSP ?**

**Ans :** Digital Signal Processing is a technique that converts signals from real world sources (usually in analog form) into digital data that can then be analyzed.

27

## **(2) What do you mean by real time signal ?**

**Ans :**

- Signal is processed with the same speed it is captured.
- Signal is not stored before processing.
- Entire input signal is never available before processing.

28

- For example, in digital telephone system, Signal is captured, Sampled, Processed , Transmitted and Made it available to the end user.

## Real Time Processing is Online Processing

29

### (3) What is Analog Signal, Digital Signal, CT signal, DT Signal ?

➤ **Analog Signal** : Signal value can be anything. NO fixed signal level.

Eg  $x(t) = \cos(100\pi t)$ . ← **Continuous Sinusoidal signal**

$x[n] = \{ 10.5, 4.7, 3.5, 5.7, 3.8 \}$   
← **Sampled signal**

30

## Digital Signal :

Only two levels +5v and 0 V.  
ie. Logically High and Low.

Eg. Binary data

0	1	0	1	1	0	1	0
---	---	---	---	---	---	---	---

31

- **Continuous Time Signal** : Signal is defined for every value of time.  
Signal value can be anything.

Eg.  $x(t) = \cos(100\pi t)$ . ← **Continuous Sinusoidal Signal**

32

## **Discrete Time Signal :**

**Signal is defined for Discrete instant of Time.**

**NOT for every value of time. Signal value can be anything.**

**Eg.  $x[n] = \{ 10.5, 4.7, 3.5, 5.7, 3.8 \}$**

**← sampled signal**

33

## **CONCEPT of Signal Processing**

**Signals commonly need to be processed in a variety of ways. For example, the output signal from a transducer may well be contaminated with unwanted electrical "noise".**

34

**The electrodes attached to a patient's chest when an ECG is taken measure tiny electrical voltage changes due to the activity of the heart and other muscles.**

35

## **Analog and Digital signals**

**In many cases, the signal is initially in the form of an analog electrical voltage or current, produced for example by a microphone or some other type of transducer.**

36

**In some situations the data is already in digital form - such as the output from the readout system of a CD (compact disc) player.**

37

**An analog signal must be converted into digital (i.e. numerical) form before DSP techniques can be applied.**

**There are two main kinds of filter, *analog* and *digital*. They are quite different in their physical makeup and in how they work.**

38

An analog filter uses analog electronic circuits made up from components such as resistors, capacitors and op amps to produce the required filtering effect. Such filter circuits are widely used in such applications as noise reduction, video signal enhancement, graphic equalizers in hi-fi systems, and many other areas.

39

**There are well-established standard techniques for designing an analog filter circuit for a given requirement. At all stages, the signal being filtered is an electrical voltage or current which is the direct analogue of the physical quantity (e.g. a sound or video signal or transducer output) involved**

40

## **Analog and digital filters**

**In signal processing, the function of a filter is to remove unwanted parts of the signal, such as random noise, or to extract useful parts of the signal, such as the components lying within a certain frequency range.**

41

**The following block diagram illustrates the basic idea.**

**A digital filter uses a digital processor to perform numerical calculations on sampled values of the signal. The processor may be a general-purpose computer such as a PC, or a specialized DSP (Digital Signal Processor) chip.**

42

- Note that in a digital filter, the signal is represented by a sequence of numbers, rather than a voltage or current.

The following diagram shows the basic setup of such a system.

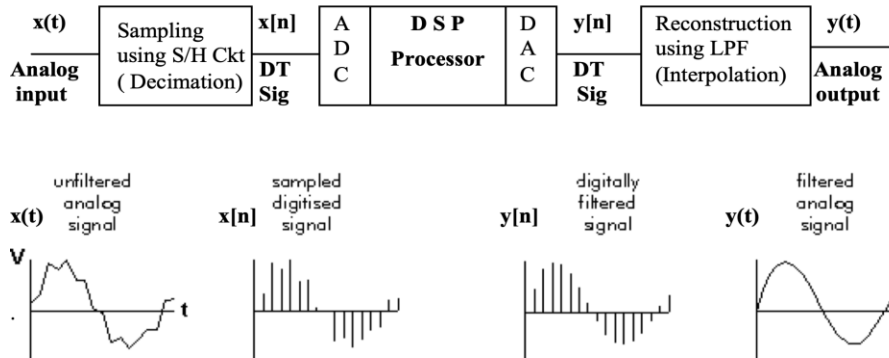

43

**Fast DSP processors can handle complex combinations of filters in parallel or cascade (series), making the hardware requirements relatively *simple* and *compact* in comparison with the equivalent analog-circuitry**

44

## What is DSP SYSTEM?

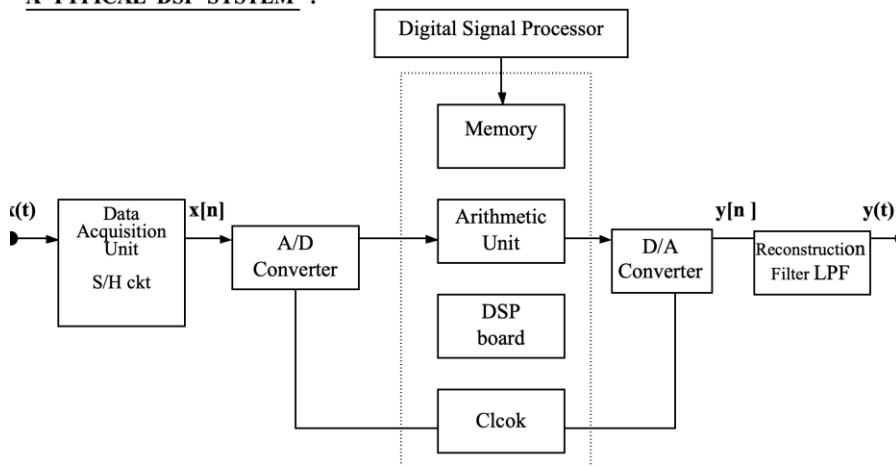

Kiran TALELE 99870 30 881 kiran.talele@spit.ac.in

45

## A Typical DSP System....

A TYPICAL DSP SYSTEM :

Kiran TALELE 99870 30 881 kiran.talele@spit.ac.in

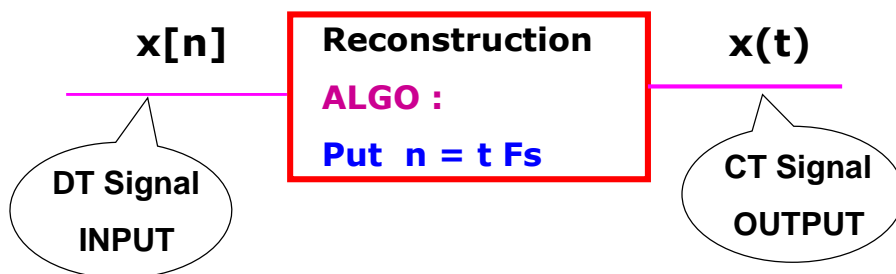

46

# Sampling

Kiran TALELE 99870 30 881 kiran.talele@spit.ac.in 47

# Reconstruction

Kiran TALELE 99870 30 881 kiran.talele@spit.ac.in 48

**H.W.** Let  $x[t] = 10 \cos(100\pi t) + 20 \cos(120\pi t) - 5 \sin(50\pi t)$ .  
 If  $x(t)$  is sampled with sampling frequency  $F_s = 200$  Hz. What will be Discrete Time Signal  $x[n]$  at  $n=0$  ?

Kiran TALELE 99870 30 881 kiran.talele@spit.ac.in

49
